

Formatting Template AAIML

A LATEX class file is available at [AAIML.cls](#). We recommend working from the LATEX source of the sample article (at [Sample.tex](#)), which has been annotated to simplify use of the macros in the class file.

Please use XeLaTeX Engine for compilation.

You can use any LaTeX Software (Overleaf, MikTeX and Texlive etc.,).

The paper should begin with a specification of the document class and AAIML class file:

```
\documentclass{AAIML}
```

The following command can be used in the LaTeX version of your paper to set the first page header:

```
\aaimlheading{1}{2000}{1-48}{4/00}{10/00}{00-000}{author list} # dates/pages from editor
```

To set your title and authors for headings:

```
\ShortHeadings{short title}{short authors}
```

For example:

```
\ShortHeadings{Minimizing Conflicts}{Minton et al.}
```

To set your page numbers:

```
\firstpageno{?} the pagenumber you are assigned to start with by the editor.
```

To set Citation:

```
\mycitation{First author name, et al.}{Article title.}{Journal name.}{Year;volume(issue) : pdf number.}{} 
```

For example:

```
\mycitation{Marina Meil\u{a}, et al.}{Sample Title for AAIML.}{Advances in Artificial Intelligence and Machine Learnin.}{2022;8(6):6.}{} 
```

Authors are specified with the ``author" macro:

```
\author{\name Author One \email author-one-email\\
\addr Author One address line one\\
Author One address line two\\
Author One address line three...
\AND
\name Author Two \email author-two-email\\
\addr Author Two address line one\\
```

```
Author Two address line two\\
Author Two address line three...}
```

If multiple authors share an affiliation, it may be appended to the group by specifying:

```
\author{\name Author One \email author-one-email\\
\name Author Two \email author-two-email\\
\addr Authors' address line one\\
Authors' address line two\\
Authors' address line three...}
```
